

ACTIVITY PACK

Activity 4: What To Install

Activity 4 - Install Tools and Skills to Do Better

Course	AI Security for Autonomous AI Agents
Course code	TGS-2025060473
Version	4.0 25 August 2026

Tertiary Infotech Pte Ltd | UEN 20120096W

What To Install

What to Install - Two Skills

Evidence status: SIM - all data is fictional. These are illustrative training skills. Turn them on in the Hermes agent (see hermes-agent.nousresearch.com/docs). No coding required.

Skill 1 - "spreadsheet-analyst"

What it is: A skill that helps the agent read tables and do calculations more reliably.

What it improves:

- Reads columns by name (Spend, Revenue, Conversions) instead of guessing.
- Does the maths step by step (totals, ROI, month-on-month change) and shows its working.
- Returns clean tables you can copy into a report.
- Flags when a number looks odd (for example, revenue that fell while spend rose).

Good test after installing: Re-run the **"top channels by ROI"** or **"executive summary"** prompt from Activity 2 and check whether the numbers are clearer and the working is shown.

What to still check yourself: The skill can calculate quickly but cannot know if the underlying data is correct. You confirm the figures make sense.

Skill 2 - "slide-formatter"

What it is: A skill that helps the agent lay out slides cleanly and apply a template consistently.

What it improves:

- Keeps bullets short and evenly spaced across slides.
- Applies the chosen template's fonts and colours consistently.
- Adds simple, tasteful title animations without overdoing it.
- Builds a proper summary slide from the key points.

Good test after installing: Re-run the detailed 5-slide prompt from Activity 3 and check whether spacing, fonts and the summary slide look more polished.

What to still check yourself: Nicer formatting does not make the content true. You confirm every point matches the script and nothing was invented.

The one rule for any new skill

Before switching on a skill, ask: **what can it read, what can it change, and who approved it?**
